Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☐ Responsive to communication(s) filed on ____.
- 2a) ☐ This action is FINAL. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 2 to 14 are rejected under 35 U.S.C. 103(a) as being unpatentable over the English abstract of Japanese patent 10017997 or the English abstract of Japanese patent 10060528 cited by applicant in IDS dated August 11, 2003.
3. The English abstract of each Japanese patent discloses an iron-nickel alloy with constituents whose wt% ranges overlap those recited by the claims; such overlap renders applicant's composition prima facie obvious despite differences in non-overlapping areas. Note that it would be obvious to one of ordinary skill in the art to select the claimed alloy wt% ranges from the broader disclosure of the prior art because the prior art has the same utility for screen tubes and similar property of low thermal expansion coefficient. See MPEP 2144.05
4. Even though the maximum content of S, Ti, Cu, P, Al, and Mg recited in claim 3 is not disclosed by prior art, such would not be a patentable difference since the lower limit of these elements are zero and therefore not required. Moreover, they are impurities restricted at low levels which is similar to the prior art which requires impurities to be maintained at low levels.

Art Unit: 1742

5. Moreover, prior art discloses the thermal expansion at less than $2.0 \times 10^{-6}/K$ or less than $1.6 \times 10^{-6}/K$ which meets claims 2, 4 or 12. See JP'997, Table 6 and JP'528, Table 6.

6. Also prior art teaches iron-nickel alloy used for screen tubes and electronic components, which would broadly encompass shadow mask, lead frames, electron guns, components and TV tubes recited by claims 5 to 11, 13 and 14.
